machinery hydraulic applications this textbook covers a very wide field of study the authors assume that students will be using commercially available software

while the text covers the standard range of material from kinematics to quantum physics hecht has carefully limited the math required to basic calculus and very basic vector analysis he omits obscure high level topics while focusing on helping students understand the fundamental concepts of modern day physics calculus and vector analysis are both painstakingly developed as tools and then used only insofar as they illuminate the physics hecht deliberately goes slowly justifies where each topic is going stops to take stock of where the students have been and points out the marvelous unity of the discourse informed by a 20th century perspective and a commitment to providing a conceptual overview of the discipline this book is a return to basics

in the early 2000s the government of sri lanka considered engaging private sector operators to manage water and sewerage services in two separate service areas one in the town of negombo north of colombo and one stretching along the coastal strip south from colombo from the towns of kalutara to galle since then the government has abandoned the idea of setting up a public private partnership in these two areas this paper is part of a series of investigations to determine how these pilot private sector transactions forming part of the overall water sector reform strategy could be designed in such a manner that they would benefit the poor the authors describe the results of a conjoint survey evaluating the factors that drive customer demand for alternative water supply and sanitation services in sri lanka they show how conjoint surveys can be used to unpackage household demand for attributes of urban services and improve the design of infrastructure policies they present conjoint surveys as a tool for field experiments and a source of valuable empirical data in the study of three coastal towns in southwestern sri lanka the conjoint survey allows the authors to compare household preferences for four water supply attributes price quantity safety and reliability they examine subpopulations of different income levels to determine if demand is heterogeneous the case study suggests that households care about service quality not just price in general the authors find that households have diverse preferences in terms of quantity safety and service options but not with regard to hours of supply in particular they find that the poor have lower ability to trade off income for services a finding that has significant equity implications in terms of allocating scarce public services and achieving universal water access
